People will attempt interaction with anything that could possibly be clickable or touchable.

Use standard, commonly accepted UI components (e.g. buttons) which are understood to be interactive.

Different text color, 3D and icons all invite interaction.

There is no hover for touch screens.

Consider the lefties of the world by making interfaces reversible.

Don’t make people reach over the interface and obstruct their view.

Indicate what can be dragged.

Use ghosting during movement.

Indicate where objects can — and cannot — be dropped.

Indicate when more content is available with commonly accepted control icons (e.g. +, -).

Use adaptive or responsive layouts: pages and columns change height (or width) in a liquid way.
